🦅 EagleTV – Incremental Phase-by-Phase Implementation Guide

(One Phase = One Upgrade = Zero Confusion)

🧱 GOLDEN RULE (Read This First)

> **At any time, the app must remain publishable.**
> No phase should leave the app in a half-broken or half-visible state.

So every phase below has:

- 🎯 Purpose
- 🧩 What to touch
- ⛔ What NOT to touch
- 🛠 Step-by-step builder actions
- ✅ Completion checklist

🔰 PHASE 0 – BASELINE LOCK (MANDATORY ONCE)

🎯 Purpose

Freeze the current app so enhancements don't accidentally rewrite working features.

🧩 What to Touch

- Versioning
- Git tag / backup
- Documentation only

⛔ What NOT to Touch

- UI
- Logic
- APIs

🛠 Builder Steps

1. Tag current build as:

```
eagle_tv_v1_baseline
```

2. Ensure these are **working**:
   - Feed loads
   - Video & image open
   - Login works
3. Create a short note:

```
Baseline features verified on <date>
```

✅ Completion Checklist

- App runs without errors
- No feature regression
- Safe rollback possible

➡️ **Now enhancement can safely begin**

🎨 PHASE 1 – BRAND & ICON REPLACEMENT

🎯 Purpose

Make the app visually owned by EagleTV.

🧩 What to Touch

- App icons
- Splash screen assets
- Static icons

⛔ What NOT to Touch

- Navigation logic
- Animations
- Feed behavior

🛠 Builder Steps

1. Take `eagle-tv.png`
2. Generate platform icons:
   - Android mipmaps
   - iOS AppIcon
3. Replace icons in:

    - Launcher
    - Splash screen
    - Top bar
    - Bottom bar
    - Media placeholders
4. Verify scaling on:
    - Small phone
    - Large phone

✅ Completion Checklist

- No default Flutter/TV icon anywhere
- Icon colors unchanged
- Light & dark themes look consistent

🟢 **Ship-ready phase**

📄 PHASE 2 – PDF SUPPORT (CONTENT LEVEL ONLY)

🎯 Purpose

Add PDF as a **first-class content type**, not an attachment.

🧩 What to Touch

- Content upload UI
- Media handling logic
- Viewer screen

⛔ What NOT to Touch

- Feed animation
- CMS roles
- Language system

🛠 Builder Steps

1. Add **PDF** option under “Add Media”
2. Validate:
    - File type
    - File size
3. Generate preview:
    - First page thumbnail

4. Open PDF using in-app viewer
5. Apply same approval workflow as video/image

🛠 Recommended Packages

- `syncfusion_flutter_pdfviewer`
- `cached_network_image`

✅ Completion Checklist

- PDF opens inside app
- Preview visible in feed
- Admin approval works
- No external browser opens

🟢 **Ship-ready phase**

📱 PHASE 3 – FLIP-STYLE FEED (STRUCTURAL CHANGE)

🎯 Purpose

Transform feed into Way2News-style immersive experience.

🧩 What to Touch

- Feed widget
- Scroll logic

⛔ What NOT to Touch

- Animations
- Like/bookmark behavior
- Translation

🛠 Builder Steps

1. Replace list feed with `PageView`
2. Enable vertical swipe only
3. Render **one post per screen**
4. Preload:
   - Next post
   - Previous post
5. Media-aware rendering:

- Video auto-play
- Image static
- PDF preview only

⚠️ Performance Rule

```
No animations beyond default PageView movement
```

✅ Completion Checklist

- Smooth swipe
- No white flashes
- Works on mid-range devices

🟢 **Ship-ready phase**

✨ PHASE 4 – MICRO-INTERACTIONS (FEEL UPGRADE)

🎯 Purpose

Make interactions feel premium without visual noise.

🧩 What to Touch

- Animations
- Haptics
- Loading states

⛔ What NOT to Touch

- Feed structure
- API calls

🛠 Builder Steps

1. Add skeleton loaders
2. Add flip resistance (soft snap)
3. Add like/bookmark burst
4. Add haptic feedback:
    - Flip
    - Like
    - Bookmark

🛠 Packages

- `flutter_animate`
- `shimmer`
- `lottie`
- `HapticFeedback`

✅ Completion Checklist

- No dropped frames
- Animations stop in background
- No animation blocks taps

🟢 **Ship-ready phase**

🌐 PHASE 5 – GLOBAL LANGUAGE SWITCHING

🎯 Purpose

True multilingual UI.

🧩 What to Touch

- UI text
- Settings

⛔ What NOT to Touch

- Feed logic
- CMS workflow

🛠 Builder Steps

1. Integrate `easy_localization`
2. Add language selector:
    - First launch
    - Settings
3. Persist language choice
4. Apply changes instantly

Languages

- English
- Telugu

- Hindi

✅ Completion Checklist

- No app restart required
- No text overflow
- Consistent spacing

🟢 **Ship-ready phase**

🔁 PHASE 6 – CONTENT TRANSLATION (SMART LAYER)

🎯 Purpose

User-controlled content translation.

🧩 What to Touch

- Content cards
- Text rendering

⛔ What NOT to Touch

- UI localization
- CMS roles

🛠 Builder Steps

1. Add “Translate” button
2. Detect source language
3. Translate inline
4. Cache translations
5. Allow toggle original ↔ translated

Logic Rule

- Manual > Auto
- Auto → label shown

✅ Completion Checklist

- No feed reload
- Cached translations reused
- Clear auto-translation indicator

🟢 **Ship-ready phase**

🧑‍💼 PHASE 7 – CMS ENHANCEMENTS

🎯 Purpose

Professional-grade content operations.

🧩 What to Touch

- CMS dashboard
- Approval workflow

⛔ What NOT to Touch

- Mobile UI
- Feed animations

🛠 Builder Steps

1. Reporter:
    - Drafts
    - Multi-language input
2. Admin:
    - Translation approval
    - Scheduling
    - Notifications
3. Add audit logs
4. Add basic analytics counters

✅ Completion Checklist

- No direct publish by reporter
- Admin override works
- Logs available

🟢 **Ship-ready phase**

🎭 PHASE 8 – CLIENT MOCKUPS (NO CODE)

🎯 Purpose

Sell vision to stakeholders.

🧩 What to Touch

- Design tools only

⛔ What NOT to Touch

- App code

🛠 Deliverables

- Flip feed
- PDF viewer
- Upload flow
- CMS overview

Formats:

- PNG
- PDF

🟢 **Presentation-ready phase**

🧠 SIMPLE IMPLEMENTATION STRATEGY

```
One phase
→ Implement
→ Test
→ Ship
→ Tag version
→ Move next
```

If you want, next I can:

- Convert **each phase into Jira tickets**
- Create **builder acceptance criteria**
- Make a **30–45 day sprint calendar**
- Generate **handoff docs for freelancers**

Just tell me the next step 🚀
